

## *Acid Base Disorders Basic Concepts And Clinical Management*

### Acid Base Disorders Basic Concepts

An acid dissociation constant,  $K_a$ , (also known as acidity constant, or acid-ionization constant) is a quantitative measure of the strength of an acid in solution. It is the equilibrium constant for a chemical reaction known as dissociation in the context of acid–base reactions.  $K_a = \frac{[A^-][H^+]}{[HA]}$ . The chemical species HA,  $A^-$ , and  $H^+$  are said to be in equilibrium when their concentrations ...

### The Medical Biochemistry Page

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 angstroms (Å) (3.4 nanometres).

Figure 1. Enterocytes lining the gastrointestinal tract are connected to each other by tight junction proteins. Paracellular absorption involves movement of ions, designated by  $Y^+$ , by diffusion down their electrochemical gradient through pores in the tight junction and into the interstitial space (IS) across the tight junctions. Minerals dissolved in water, designated by  $Z$ , can move across the ...

Many of you have probably heard of the "alkaline diet." There are a few different versions of the acid-alkaline theory circulating the internet, but the basic claim is that the foods we eat leave behind an "ash" after they are metabolized, and this ash can be acid or alkaline (alkaline meaning more basic on the pH scale).
