Animal Encyclopedia The First Step

Ocean animals consist of four main types of warm-blooded, live-bearing marine mammals - whales, seals, manatees and otters. The evolutionary paths of these complicated animals finds them crawling out of the prehistoric ocean onto dry land as cold-blooded creatures hundreds of millions of years ago.

The domestication of animals is the mutual relationship between animals with the humans who have influence on their care and reproduction. Charles Darwin recognized the small number of traits that made domestic species different from their wild ancestors. He was also the first to recognize the difference between conscious selective breeding in which humans directly select for desirable traits ...
