### **Art Et Aberrations**

A lens is a transmissive optical device that focuses or disperses a light beam by means of refraction. A simple lens consists of a single piece of transparent material, while a compound lens consists of several simple lenses (elements), usually arranged along a common axis. Lenses are made from materials such as glass or plastic, and are ground and polished or molded to a desired shape.

I became convinced by mountains of reputable testimony that the U.S. government is suppressing critical data about UFOs and ET contact, even as other governments around the world are disclosing more and more information. The American government covers up evidence by denying eyewitness accounts, confiscating military records and video footage, and suppressing information from people who claim to ...

Au XIX e siècle, avec la croissance de la presse de masse et l'invention en 1796 de la lithographie, la caricature politique acquiert une très grande importance au Royaume-Uni puis en France. Le roi Charles X rétablit la liberté de presse en 1824 en proclamant la suppression totale de la censure, ce qui favorise la multiplication de caricatures qui se mettent à brocarder sa sottise, sa ...

Jean Dubuffet (Le Havre, 31 juillet 1901, Paris, 12 mai 1985), est un peintre, sculpteur et plasticien français.. Il est le premier théoricien d'un style d'art auquel il a donné le nom d'« art brut », des productions de marginaux ou de malades mentaux : peintures, sculptures, calligraphies, dont il reconnaît s'être lui-même largement inspiré. Le 20 octobre 1945, la première ...

joining cults - religious choice or psychological aberration. A.The first approach understands cult conversion as the result of being "zapped;" I call this the "rays from outer space" theory.In this scenario, a young person who is a well-adjusted member of a healthy family happens on a cult recruiter in some public place, and is either instantly sucked in or barely escapes to tell the tale.

A distortion artifact arises in the Greenough microscope design due to the oblique separation of each body tube from a common axis. Termed the Keystone effect, this distortion causes the area on the left side of the right eye to appear slightly smaller than that on the right-hand side of the same image, and of course the reverse is true for the left eye's image (see Figure 5).

The 146 page review published by Tolgskaya and Gordon (1973) found that in studies of histological changes in rodents, the three most sensitive organs in the body to non-thermal microwave EMFs were the nervous system (including the brain), followed closely by the heart and the testis. They also reported changes in neuroendocrine tissues and increased cell death in multiple tissues.
