Complications Of Gynecologic Procedures Abortion

Uterine perforation is a potential complication of all intrauterine procedures and may be associated with injury to surrounding blood vessels or viscera (bladder, bowel) [1,2]. In addition, uterine perforation and associated complications can result in hemorrhage or sepsis. The risk of uterine ...

Uterine perforation during gynecologic procedures - UpToDate

Abortion is the ending of a pregnancy by removal or expulsion of an embryo or fetus before it can survive outside the uterus. An abortion that occurs without intervention is known as a miscarriage or spontaneous abortion. When deliberate steps are taken to end a pregnancy, it is called an induced abortion, or less frequently "induced miscarriage".The unmodified word abortion generally refers ...

Per aborto spontaneo si intende l'espulsione involontaria di un embrione o del feto prima della 24^a settimana di gestazione. Una gravidanza che termina prima della 37^a settimane di gestazione con la nascita di un bambino vivo è conosciuto come un "parto prematuro" o "nascita pretermine". Quando un feto muore nell'utero durante il parto, di solito è definito "nato morto".
