Equine Digestive Tract Structure and Function Table of Contents. Introduction; Colic; Laminitis; Feed Intake; References; Introduction. A horse has the same requirements for energy, protein, vitamins and minerals as other animals but differs in the type and function of its digestive system, falling between a ruminant and non ruminant.

Equine Digestive Tract Structure and Function

Muscle is a soft tissue found in most animals. Muscle cells contain protein filaments of actin and myosin that slide past one another, producing a contraction that changes both the length and the shape of the cell. Muscles function to produce force and motion. They are primarily responsible for maintaining and changing posture, locomotion, as well as movement of internal organs, such as the ...

Muscle - Wikipedia

Body Systems Definition. Body systems are groups of organs and tissues that work together to perform important jobs for the body. Some organs may be part of more than one body system if they serve more than one function.
