

Marine Genetic Resources Access And Benefit Sharing Legal And Biological

Marine Genetic Resources Access And

Marine and coastal living resources make up one of the programme elements of the elaborated programme of work on marine and coastal biological diversity, adopted at the seventh meeting of the Conference of the Parties and contained in the annex to decision VII/5.

Marine and Coastal Living Resources - CBD

The Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization to the Convention on Biological Diversity is an international agreement which aims at sharing the benefits arising from the utilization of genetic resources in a fair and equitable way. It entered into force on 12 October 2014, 90 days after the date of deposit of ...

Associate Professor, College of Science and Engineering | I joined Flinders University in 2006 as a post-doctoral researcher to work on the ecology of the Coorong wetlands, focusing on the impact of environmental change on microbial and plankton communities. I took on a Lecturer position at Flinders University in 2008 and furthered my research on the adaptation of plankton to salinity ...

Associate Professor Sophie Leterme - Flinders University

Collectively, the benefits provided to humans by ecosystems are referred to as ecosystem services. Table 1 provides some examples of marine ecosystem services, which comprise various goods, services and cultural or other benefits. The goods produced by marine ecosystem services are the products obtained from these habitats, such as fish harvests, wild plant and animal resources, and abstracted ...

Market Analysis. Aquaculture is an inhabitant in which fish farming is practiced in different cultures such as marine water, freshwater, and brackish water. Different species of fish are cultivated and harvested in an ideal condition through aquaculture. These fish are further profitable for different applications such as food industry, dietary supplement, and others.

A marine protected area (MPA) is essentially a space in the ocean where human activities are more strictly regulated than the surrounding waters - similar to parks we have on land. These places are given special protections for natural or historic marine resources by local, state, territorial, native, regional, or national authorities. Authorities differ substantially from nation to nation.

What are marine protected areas (MPAs)?

Marine mammals are aquatic mammals that rely on the ocean and other marine ecosystems for their existence. They include animals such as seals, whales, manatees, sea otters and polar bears. They do not represent a distinct taxon or systematic grouping, but rather have a polyphyletic relation due to convergent evolution, as in they do not have an immediate common ancestor.

Ex situ conservation literally means, "off-site conservation". It is the process of protecting an endangered species, variety or breed, of plant or animal outside its natural habitat; for example, by

removing part of the population from a threatened habitat and placing it in a new location, which may be a wild area or within the care of humans. The degree to which humans control or modify the ...

A knowledge of how to manage environments, whether they be our forests, river catchments or oceans is crucial to influencing the sustainability of our future. This combined degree brings together the terrestrial aspects of environmental management with marine science and management, developing knowledge of the complex environments in which we live and the keys to environmental problems at a ...
