Parkinson S Disease And Parkinsonian

Parkinson's disease (PD) is a long-term degenerative disorder of the central nervous system that mainly affects the motor system. As the disease worsens, non-motor symptoms become increasingly common. The symptoms generally come on slowly over time. Early in the disease, the most obvious are shaking, rigidity, slowness of movement, and difficulty with walking.

Parkinson's disease - Wikipedia

Parkinson's disease is due to the loss of brain cells that produce dopamine. Early signs and symptoms of Parkinson's disease include tremors or trembling, slow movement, body rigidity and stiffness, and problems walking. There are five stage of Parkinson's disease for which there is no cure. Symptoms can be managed with medication and therapy.

1.1 Communication with people with Parkinson's disease and their carers. 1.1.1 Communication with people with Parkinson's disease should aim towards empowering them to participate in judgements and choices about their own care. [2006] 1.1.2 In discussions, aim to achieve a balance between providing honest, realistic information about the condition and promoting a feeling of optimism.

Recommendations | Parkinson’s disease in adults - NICE

The causes of Parkinson's disease (PD), the second most common neurodegenerative disorder, are still largely unknown. Current thinking is that major gene mutations cause only a small proportion of all cases and that in most cases, non-genetic factors play a part, probably in interaction with susceptibility genes.

Epidemiology of Parkinson's disease - ScienceDirect

1. Clinical and pathological phenotype of Parkinson's disease (PD) Parkinson's disease (PD) is a debilitating neurodegenerative disorder with standardized worldwide incidence rates of 8–18 per 100,000 person-years as reported in prospective population-based studies .PD is rare before the age of 50, but its prevalence increases with age affecting more than 1% of the population over the age of ...

Genetics of Parkinson's disease - ScienceDirect

Parkinson disease (PD) is one of the most common neurologic disorders, affecting approximately 1% of individuals older than 60 years and causing progressive disability that can be slowed, but not halted, by treatment.
