### **The Steiner Tree Problem**

Steiner tree problem, or minimum Steiner tree problem, named after Jakob Steiner, is an umbrella term for a class of problems in combinatorial optimization. While Steiner tree problems may be formulated in a number of settings, they all require an optimal interconnect for a given set of objects and a predefined objective function.

Steiner Tree. The Steiner tree of some subset of the vertices of a graph is a minimum-weight connected subgraph of that includes all the vertices. It is always a tree. Steiner trees have practical applications, for example, in the determination of the shortest total length of wires needed to join some number of points (Hoffman 1998, pp. 164-165).

The priority of Steiner education is to provide a healthy and creative learning environment, where learning is a joy, where the outdoors is a classroom, where pupils can fully experience childhood rather than being rushed through it, where their strengths are allowed to fully flourish and they are supported where necessary.

Physarum polycephalum, literally the "many-headed slime", is a slime mold that inhabits shady, cool, moist areas, such as decaying leaves and logs. Like slime molds in general, it is sensitive to light; in particular, light can repel the slime mold and be a factor in triggering spore growth.

A tree is a mathematical structure that can be viewed as either a graph or as a data structure. The two views are equivalent, since a tree data structure contains not only a set of elements, but also connections between elements, giving a tree graph. Trees were first studied by Cayley (1857). McKay maintains a database of trees up to 18 vertices, and Royle maintains one up to 20 vertices.

A Graph is a non-linear data structure consisting of nodes and edges. The nodes are sometimes also referred to as vertices and the edges are lines or arcs that connect any two nodes in the graph. More formally a Graph can be defined as, A Graph consists of a finite set of vertices(or nodes) and

The letters O.T.O. (or OTO) stand for Ordo Templi Orientis. The O.T.O. is a pseudo-masonic organization. Neither the use of the letters nor of the full name is unique to any group. Since the founding of the O.T.O. in 1906 in Germany, many groups have appropriated the name, its abbreviations, and acronyms and imbued them with contents to their own taste and liking.
